NAME
rgbgfx — Game Boy graphics converter

SYNOPSIS
rgbgfx [-DfFhPTVv][-o *outfile*][-d *depth*][-p *palfile*][-t *mapfile*][-x *tiles*]
file

DESCRIPTION
The **rgbgfx** program converts PNG images into the Nintendo Game Boy's planar tile format. The arguments are as follows:

-D Debug features are enabled.

-f Fix the input PNG file to be a correctly indexed image.

-F Same as -f, but additionally, the input PNG file is fixed to have its parameters match the command line's parameters.

-d *depth*
  The bitdepth of the output image (either 1 or 2). By default, the bitdepth is 2 (two bits per pixel).

-h Lay out tiles horizontally rather than vertically.

-o *outfile*
  The name of the output file.

-p *palfile*
  Raw bytes (8 bytes for two bits per pixel, 4 bytes for one bit per pixel) containing the RGB15 values in the little-endian byte order and then ordered from lightest to darkest.

-P Same as -p, but the pallete file output name is made by taking the input filename, removing the file extension, and appending *.pal*.

-t *mapfile*
  If any tiles are the same, don't place the repeat tiles in the output file, and make a tilemap file.

-T Same as -t, but the tilemap file output name is made by taking the input filename, removing the file extension, and appending *.tilemap*.

-u Truncate repeated tiles. Useful with tilemaps.

-V Print the version of the program and exit.

-v Verbose. Print errors when the command line parameters and the parameters in the PNG file don't match.

-x *tiles*
  Trim the end of the output file by this many tiles.

EXAMPLES
The following will take a PNG file with a bitdepth of 1, 2, or 8, and output planar 2bpp data:

  $ rgbgfx -o out.2bpp in.png

The following creates a planar 2bpp file with only unique tiles, and its tilemap *out.tilemap*:

  $ rgbgfx -T -u -o out.2bpp in.png

The following will do nothing:

  $ rgbgfx in.png

HISTORY

        `rgbgfx` was created by stag019 to be included in RGBDS. It is now maintained by a number of contributors at https://github.com/rednex/rgbds.
